BENEFITS OF

# Threat Image Recognition Training

Southpac's Threat Image Recognition Training (TIRT) is a globally proven, flexible, and comprehensive solution that supports aviation security screening excellence across multiple operational needs.

## MODULAR. EFFECTIVE. CONTINUOUS.

Our TIRT is a commercial off-the-shelf system that is adaptable to your aviation security framework. With users including security service providers, airports and Regulated Air Cargo Agents, the training is continuously updated in line with the actual threat environment, ensuring improvements and upgrades are applied for all users.

## KEY BENEFITS

### 1 Screener Certification & Recertification

Supports national regulatory obligations with structured, controlled assessments. Ensures operational screeners can consistently identify a broad spectrum of threats – from basic to complex, novel threats.

### 2 Continuation Training

Reduces screener 'skill fade' and maintains screener proficiency with at least 60 minutes of training monthly recommended. Access to over 2,500 threat image sets keeps cognitive recognition skills sharp and evolving.

### 3 Quality Spot Checks

Trained screeners can be selected at random and exposed to a pre-selected range of threat images to ascertain the ability to consistently detect specific threats.

### 4 Custom Training Packages

Pre-built or custom-created Training Packages (TPs) allow for group or individual learning. Ideal for refresher training, blended learning, and remedial plans.

---

**Supports all screening disciplines**

Including 2D Dual View and 3D Computed Tomography for cabin and hold baggage, as well as air cargo and mail screening.

**Detailed analytics and dashboards**

Track scores, training time, and compliance through intuitive, graphic-rich dashboards – at both individual and group levels.

**Easy to deploy and maintain**

No expensive hardware required – even for 3D CT, with online administrator training included, plus ongoing support available.
